Work Experience & Projects

**April - July
2026**

Saha Pathanapibul Public Company Limited

Network Engineer Intern - Infrastructure & Operations Department

- Provisioned switches and access points across the corporate network, including VLAN segmentation, DHCP scopes, and uplinks, and rebuilt the topology documentation to give the team an accurate map to work from
- Automated collection of Microsoft Entra sign-in logs into Grafana with Python, replacing manual review with targeted checks and alerts that reach the team the moment anomalies appear
- Piloted proof-of-concept deployments across multiple vendors, from DLP platforms to enterprise networking gear, learning first-hand how each stack behaves in practice
- Delivered the network for Sahagroup Fair, working from the preparation days through the event itself
- Supported hands-on data center work on a regular basis structured cabling, in-rack equipment relocation, and routine server maintenance

**April - July
2026**

Internal-development-platform

Full-Stack Developer & Deployment

- Built a self-service project scaffolding flow with 10+ starter templates, cutting new-project setup from manual configuration to minutes
- Designed a multi-environment deployment pipeline with validate, build, and deploy stages plus rollback, reducing failed releases reaching production
- Implemented a governance layer covering role-based access control (owner/leader/developer/auditor), approval workflows for protected environments, and an append-only audit log, closing the accountability gaps found during assessment
- Delivered a platform-wide health dashboard surfacing runner status and deploy target utilization, giving admins real-time infrastructure visibility

**Jan - April
2026**

Cancer Patient Healthcare Systems

Full-Stack Developer & Deployment

- Assessed the inherited system against its requirement specifications to identify unmet and incomplete features, then set the scope and direction of the work
- Mapped the system's data flows with STRIDE and the CIA Triad against OWASP and NCSA-aligned baselines, exposing the highest-risk paths for patient data and producing the control backlog that directed the rebuild
- Rebuilt the application on Node.js and Vue, reshaping the architecture to satisfy the security requirements while fitting the context of actual use
- Validated the rebuilt system with 180 unit and 104 integration test cases plus end-to-end runs across the web application and patient-facing LINE platforms
- Deployed the system from local development to a containerized cloud environment, delivering the full documented scope and leaving none of the six high-severity risks identified at review unmitigated

Education

2022 - 2026

King Mongkut's Institute of Technology Ladkrabang

Bachelor of Science Program in Information Technology

Specialization in IT Infrastructure

Additional Information

Technical skills: Go, Python, Node.js, AWS (VPC, IAM, EC2), Docker, GitLab CI/CD, GitHub, Linux/Ubuntu, Grafana, OpenSearch, Network Design and Configuration

Certificates: Huawei ICT Competition 2024 - Top 10 (Cloud Track), HCCDA-Tech Essentials, CISCO APJC NetAcad Riders

Languages: Thai (Native), English (working proficiency)

Interests: AI adoption in enterprise environments: contextual data insight, data flow governance, and the security controls that make both viable
